

AI-Enhanced Market Intelligence & LC Connect

Concise strategic report for Laser Components

Purpose: demonstrate how public AI research, LC Connect-type internal intelligence and CRM/report data can be combined into a persistent commercial intelligence layer for prospecting, cross-selling and account development.

Key conclusion: public AI research provides broad market coverage; LC Connect adds company-specific commercial context and long-tail opportunities. A permanent, expanded internal AI layer could turn fragmented knowledge across the company into an actively searchable and reusable sales asset.

1. Demonstrated value - Czech Republic

The Czech Republic is a strong example because the public-web sweep identified the visible photonics and defence players, while LC-specific intelligence revealed a second layer of highly relevant OEMs in simulation, UAVs, LiDAR, industrial sensing and optoelectronics.

Company	Application / relevance	Likely LC fit	Status
VR Group	Laser combat simulation	905 nm emitters, Si detectors	LC addition
Argotech	Photonics assembly / LiDAR	VCSEL, LD, photodiodes	LC addition
Primoco UAV	UAV payloads with LRF/LiDAR	PLD, APD/InGaAs	LC addition
LPP Holding	Defence EO / laser designators	PLD, APD, filters	LC addition
SQS Vláknová optika	Laser drivers / optical assemblies	LD, optics	LC addition
Micro-Epsilon Czech	Laser triangulation / distance sensing	LD, PIN detectors	LC addition
Lightigo	LIBS instrumentation	Laser sources, detectors	LC addition
EVPÚ Defence	EO / own LRF systems	PLD, APD, InGaAs	Web + LC
Meopta	Military / industrial optics	Optics, detectors, lasers	Web + LC

Illustrative opportunity map - Czech Republic

Examples of additional targets surfaced through LC-specific intelligence

Figure 1. Illustrative opportunity map. It is a strategic visualisation, not a GIS or navigation map.

2. Additional qualified companies identified in other markets

Country	Examples surfaced / strengthened by LC-specific intelligence	Commercial relevance
Poland	TopGaN; Fluence Technology; Inframet; Autocomp; ■ukaszewicz-PI	Laser diodes, femtosecond lasers, EO test, simulation, robotics/LiDAR
Slovakia	Photoneo; Metrodat / LAWAREC; KONŠTRUKTA-Defence	3D vision, laser warning, fire-control
Hungary	Mediso; ZerLux; CE Optics	APD/SiPM imaging, industrial lasers, ultrafast diagnostics
Serbia	Yugoimport-SDPR; EDePro; Vlatacom	Eye-safe LRF, guided weapons, multisensor EO
Slovenia	Valhalla Turrets; Guardiaris; Cosylab; Optacore	RCWS/LRF, simulation, laser control, specialty fibre
Croatia	AntiLaser / AL Priority; SpeedLab / G-Zona; DOK-ING	905 nm emitters/detectors, LiDAR/UGV
Lithuania	Optogama; Aktyvus Photonics; Astrolight; Integrated Optics; LIDARIS	1.54 µm lasers, designators, laser comms, OEM modules, LIDT
Estonia	DefSecIntel; Milrem Robotics; ESTLA	C-UAS EO/LRF, robotics, scientific lasers
Ukraine	Ukrspecsystems; Archer; FRDM Group; Fulltime Robotics	UAV LRF, military sights, designators, directed-energy development

3. Example: AI-assisted MSPO Kielce visit planning

A previous MSPO workflow combined company profiles, technical relevance, fair/exhibitor information and stand locations into a prioritised visit route. The reconstructed route below includes Creotech, Transactor, PREXER, Vertigo/NES, SpaceForest, CTech, Creotech Quantum/PPTF, WB, Deep Trekker, BELMA, MESKO, PCO and PIT-RADWAR.

MSPO Kielce - AI-assisted visit route (schematic reconstruction)

Prioritisation combined exhibitor data, technical fit, company profiles and stand locations.

Figure 2. Schematic reconstruction of the AI-assisted MSPO 2026 visit map. Stand references are based on the prior working list; this is not the official venue floor plan.

4. Why a permanent expanded 'LC Connect+' capability matters

Institutional memory. Sales reports, CRM entries, product knowledge, past quotations, visits and market research become reusable company knowledge instead of remaining in separate people, folders or systems.

Cross-selling. AI can detect that a customer buying one component family has an application that is also relevant to another LC product line, even when the responsible sales teams or databases are organisationally separated.

Relationship graph. Contacts, subsidiaries, integrators, OEMs, universities, distributors and end users can be linked across countries and business units, exposing connections that are difficult to see manually.

Prospecting tuned to LC. With access to historical reports and CRM data, additional retrieval/classification skills could be configured around LC-specific patterns: applications, wavelengths, detector technologies, OEM architecture, buying signals and customer similarity.

Event intelligence. Exhibitor lists can be automatically ranked by technical fit, likely component demand, known contacts and geographic/stand efficiency before a trade fair.

Account preparation. Before a meeting, AI can produce a short account brief: known projects, relevant LC products, open quotations, internal contacts, likely cross-sell and recommended questions.

Management intelligence. Repeated field observations can be aggregated into country trends, competitor signals, technology shifts and product-demand patterns without requiring manual consolidation.

A practical architecture would combine a secure internal retrieval layer, CRM connectors, report/document ingestion, product taxonomy, permission controls and an AI reasoning layer. It should augment existing systems rather than require a single monolithic IT migration.

5. Human impact

AI will automate a growing share of research, reporting, data consolidation and routine commercial analysis. This does not imply that commercial expertise becomes irrelevant; rather, the competitive advantage shifts toward employees who can combine domain knowledge, customer judgement and relationship skills with effective use of AI. In many roles, the distinction will increasingly be between people who work with AI and those who perform the same information work manually.

6. Innovative extensions

Further extensions could include lead scoring, similarity-based prospect discovery, automatic cross-selling suggestions, tender and project monitoring, competitor mapping, product-gap detection, meeting preparation and follow-up drafting. Public professional information may also be used to prioritise likely decision-makers using job-relevant signals such as role, technical responsibility, publications, patents, project history and professional activity. Personality or behavioural profiling from social-media activity is more sensitive and should only be considered with an appropriate external data provider, legal/privacy review and clear controls; job-relevant professional signals are generally the more robust starting point.

7. Recommendation

Laser Components should evaluate retaining and expanding an LC Connect-like AI capability as a permanent internal commercial-intelligence platform. The highest-value version is not merely a search assistant: it is a secure company knowledge graph that continuously connects customers, contacts, applications, products, reports, CRM history, events and external market signals. The objective is faster discovery, better cross-selling, stronger account preparation and preservation of institutional knowledge.
