BRIEFING FOR LASER COMPONENTS

LC Connect

what it is and how it works

Monday, 5 October 2026 · prepared by AutoOffice

We do not train a model. **We build a harness.**

The engine

A model from OpenAI or Anthropic.
Rented as it is, and replaceable.

The harness

Tools that give the engine your
products, your lead base and your rules.
A memory of corrections that grows
with daily use.

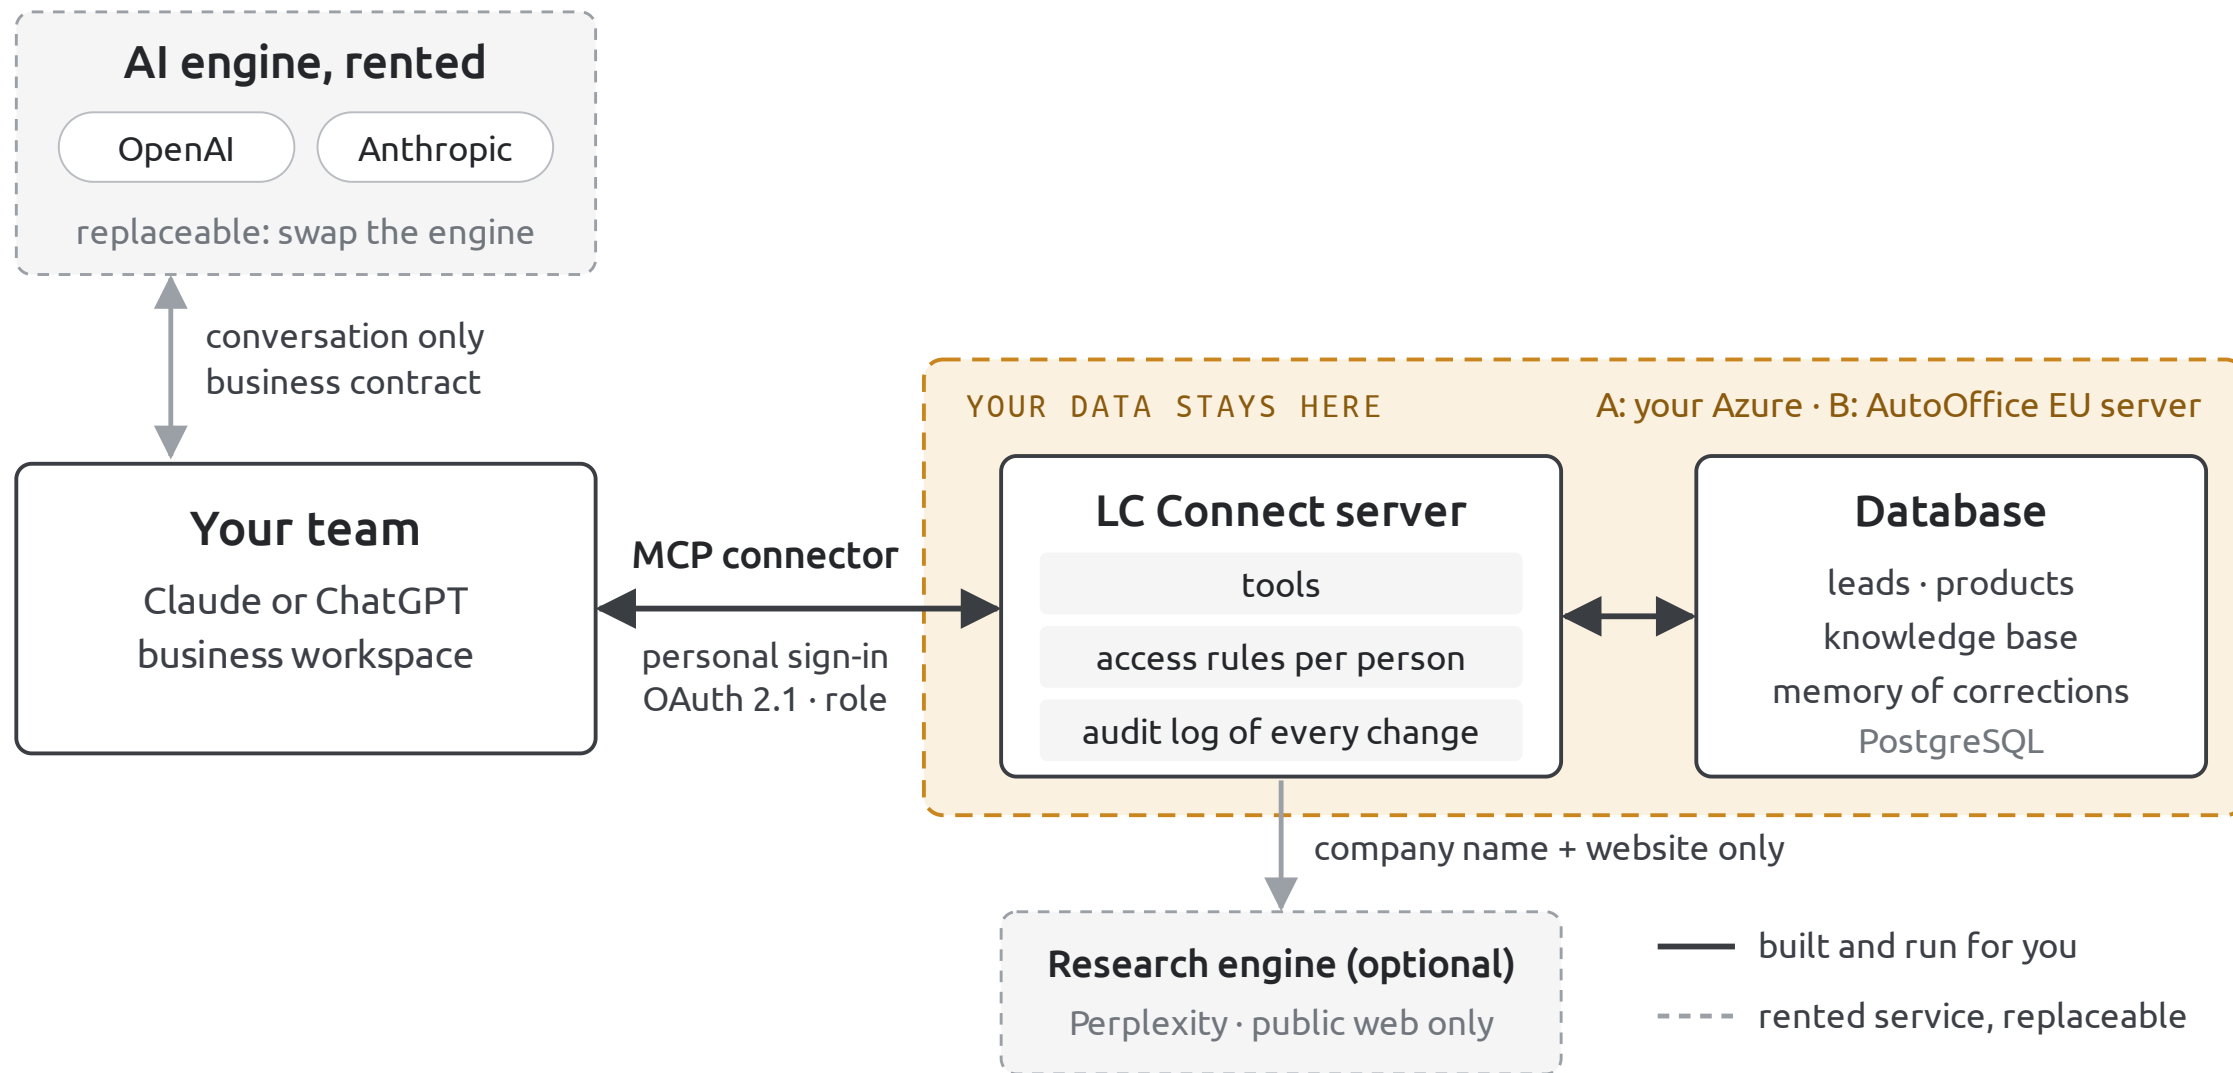

TRAINING A MODEL

Hundreds of thousands. **Frozen** the day it is
finished.

BUILDING A HARNESS

Learns every working day. No GPU
purchase needed.

Your data stays with you. **The engine is rented.**

Security depends on the **contract**, not on the tool.

Business plans	OpenAI and Anthropic: no training on your data, zero data retention by contract. OpenAI offers EU-hosted models.
-----------------------	--

Copilot · ChatGPT · Claude	Same question, same answer: it is the contract that protects you.
-----------------------------------	---

Our rule: the connector runs only in company business accounts, never in private subscriptions.

The pilot today holds public data only: website and public registers. No company data has been uploaded.

What it **already** does

Same question to Claude and ChatGPT, 29 Sept: *“Which companies use pulsed laser diodes?”*

FOUND IN LEAD BASE

POLAND

CZECH REPUBLIC

Without LC Connect

4–8

of 6–12 names are in the lead base

0–4

of 5–11 names are in the lead base

With LC Connect

16 of 16

all pulsed-diode prospects in the base

14 of 14

all pulsed-diode prospects in the base

Country discovery

One question returns a country’s prospects.

Trade-fair preparation

In Łukasz’s own use, about 65 % of suggested contacts confirmed.

Roles and audit trail

Everyone signs in personally. Every change is logged.

What it **is not**

✗ Not a replacement for Copilot for emails

✗ Not a CRM

✗ Not a fine-tuned model

✗ Not a data lake

It is a **research and knowledge harness for leads.**

Where it **could** go

Know-how out of heads

A working knowledge base the whole team can ask.

Visit effectiveness by industry

LATER PHASE

Years of visit reports plus ERP data.

Trade-fair planning

Who to meet, prepared before the fair.

Access to ERP or CRM data is a later phase and needs your decision.

Connecting the dots

Spot when two customers together will need Laser Components.

Module fit before design

Diode plus optics, suggested for a customer request.

What we **need from you**

- 1 Green light to make the pilot formal
- 2 Hosting choice A: your Azure · B: AutoOffice EU server
- 3 Business workspace accounts for pilot users
- 4 A named IT contact for data protection and security questions
- 5 A date in Munich second week of November

Security pack in one page

Sign-in

OAuth 2.1 with PKCE. One account per person. Session tokens valid 4 hours, silent refresh.

Limits

Rate limits on sign-in. Size limits on every request.

Backups

Nightly, kept 30 days, on-site and off-site.

Hosting

A: your Azure tenant. B: AutoOffice-managed server in the EU.

Roles

ADMIN, RESEARCHER, SALES. Editing limited by ownership and region.

Logs

Structured, with personal data redacted.

Watchdog

Full sign-in check every 5 minutes. Restart and alert on failure.

Data protection

Data processing agreement (AVV) as an annex. Personal data stored in the EU.

Audit log

Every write: who, when, before and after. Refused attempts too.

Transport

HTTPS end to end. Passwords stored hashed (bcrypt).

Research engine

Perplexity receives a public company name and website only.

Exit

Full source in your repository. Data exported and deleted within 30 days.
