BRIEFING FOR LASER COMPONENTS

LC Connect what it is and how it works

Monday, 5 October 2026 · prepared by AutoOffice

THE IDEA

We do not train a model. **We build a harness.**

The connector from the service package you received on 15 September: we call it the harness.

The engine

A model from OpenAI or Anthropic. Rented by you, under your business plan; replaceable.

The harness

Tools that give the engine your products, your lead base and your rules. Designed to learn from every correction.

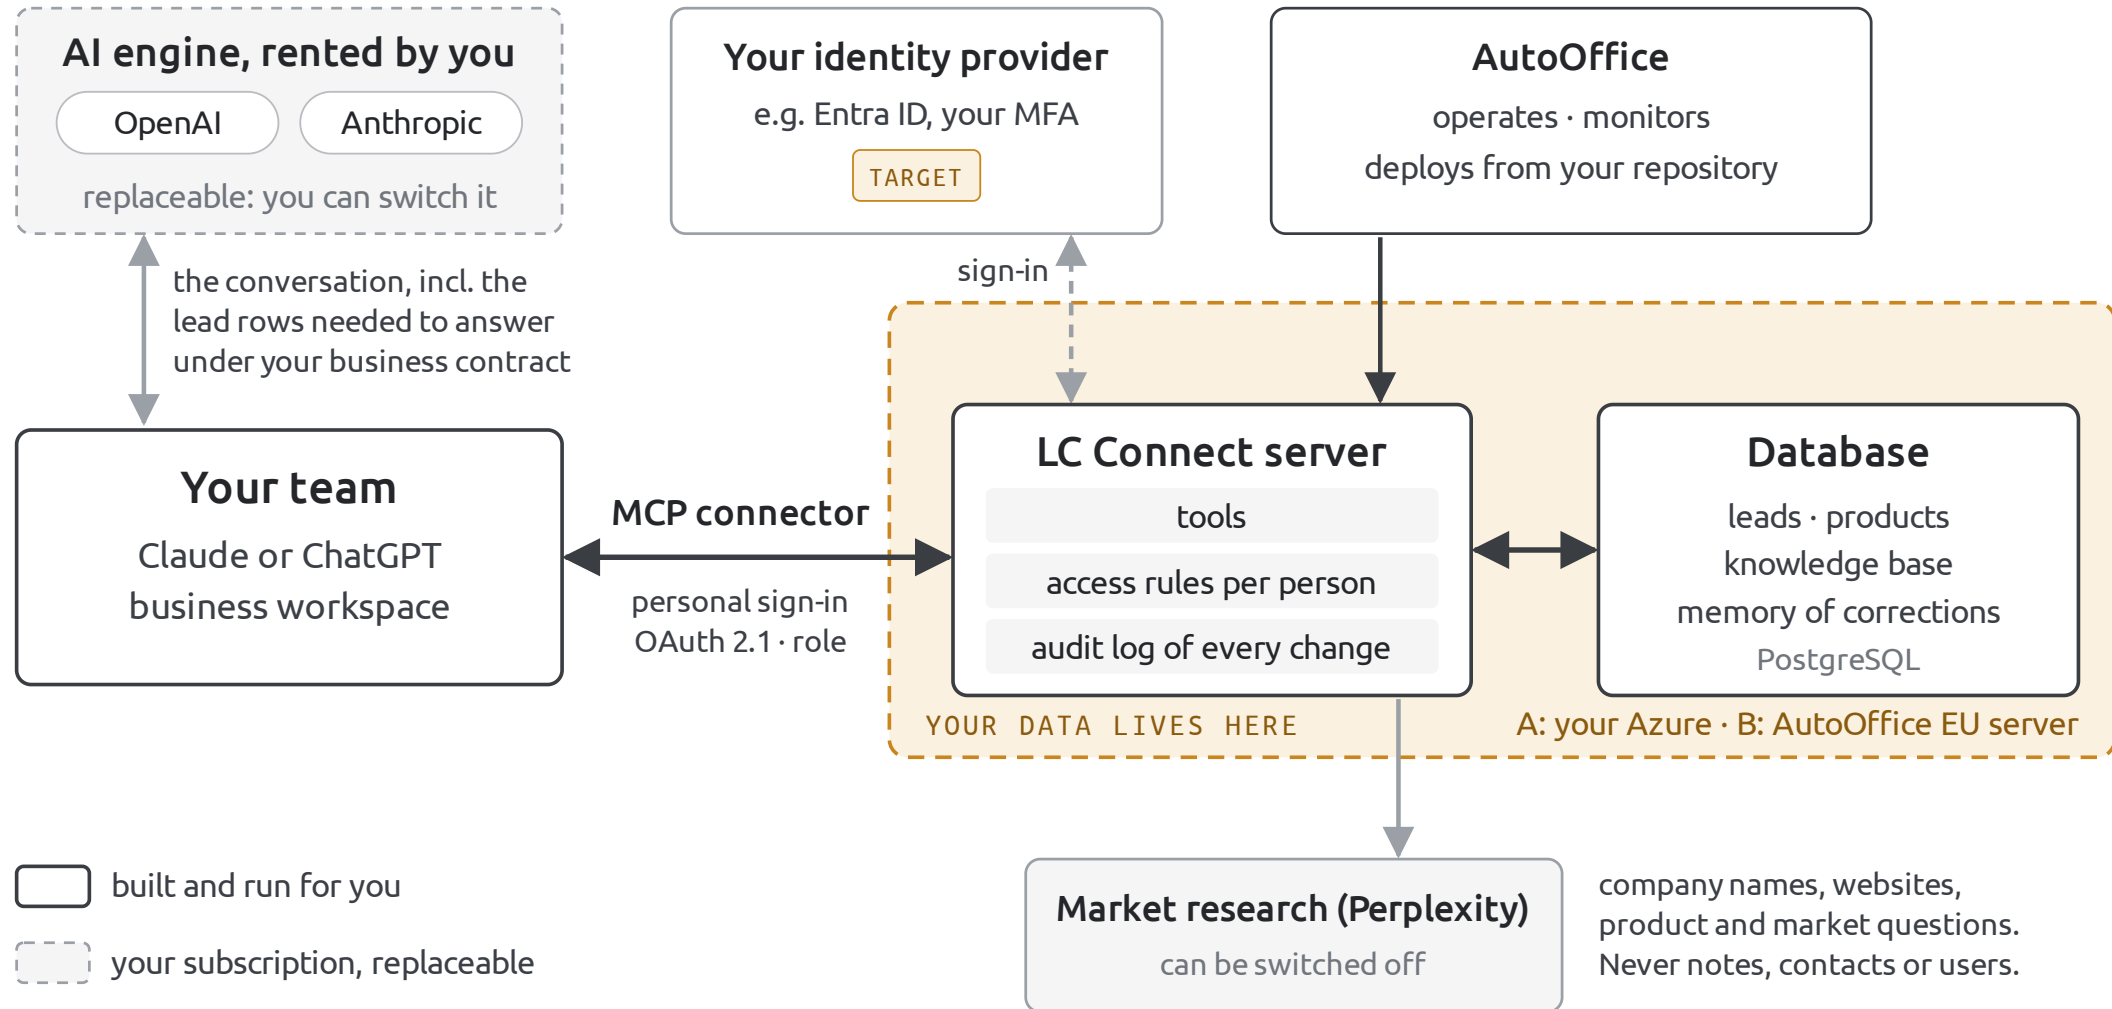

TRAINING A MODEL

Hundreds of thousands. **Frozen** the day it is finished.

BUILDING A HARNESS

Improves with daily use. No GPU purchase needed.

Your data stays in one place you choose. The engine is rented by you.

Security depends on the **contract**, not on the tool.

Business plans

OpenAI and Anthropic: no training on your data by default. Data retention and EU data residency are set in your contract with the vendor.

Copilot · ChatGPT · Claude

Same question, same answer: it is the contract that protects you.

Our rule: the connector runs only in company business accounts, never in private subscriptions.

Pilot tests so far ran on personal accounts with public data only. From the formal pilot on: business workspaces only.

What it **already** does

Same question to Claude and ChatGPT, 29 Sept: *“Which companies use pulsed laser diodes?”*

FOUND IN LEAD BASE

POLAND

CZECH REPUBLIC

Without LC Connect

4–8

of 6–12 names are in the lead base

0–4

of 5–11 names are in the lead base

With LC Connect

16 of 16

(Claude) all pulsed-diode prospects in the base

14 of 14

(ChatGPT) all pulsed-diode prospects in the base

Country discovery

One question returns a country’s prospects.

Trade-fair preparation

About 65 % of suggested companies were worth the visit (Łukasz’s trade-fair test).

Roles and audit trail

Everyone signs in personally. Every change is logged.

What it **is not**

✗ Not a replacement for Copilot for e-mail
Copilot can use the same open protocol; to be validated in the pilot.

✗ Not a CRM

✗ Not a fine-tuned model

✗ Not a data lake

It is a **lead-research connector**: the harness around your AI assistant.

Where it **could** go

Know-how out of heads

A working knowledge base the whole team can ask.

NEEDS YOUR DATA DECISION

Visit effectiveness by industry

Years of visit reports plus ERP data.

NEEDS YOUR DATA DECISION

Trade-fair planning for the whole team

Who to meet, prepared before every fair.

Access to ERP or CRM data is a later phase and needs your decision.

Connecting the dots

Spot when two customers together will need Laser Components.

NEEDS YOUR DATA DECISION

Module fit before design

Diode plus optics, suggested for a customer request.

NEEDS YOUR DATA DECISION

What we **need from you**

- 1 Green light for the formal pilot terms follow in Munich
- 2 Hosting choice A: your Azure · B: AutoOffice EU server
- 3 Identity provider for sign-in Entra ID / Google / Okta
- 4 NDA and data processing agreement signed before any company data goes in
- 5 Business workspace accounts for pilot users
- 6 Confirm the IT contact for security questions
- 7 A date in Munich second week of November

Security pack in one page

Sign-in

OAuth 2.1 with PKCE, tokens 4 h. Today: personal accounts, one per person. Target: your identity provider with your MFA.

Limits

Rate limits on sign-in. Size limits on every request.

Backups

Nightly, kept 30 days, on-site and off-site.

Hosting

A: your Azure tenant. B: AutoOffice-managed server in the EU.

Roles

ADMIN, RESEARCHER, SALES. Editing limited by ownership and region.

Logs

Structured, with personal data redacted.

Watchdog

Full sign-in check every 5 minutes. Restart and alert on failure.

Data protection

Data processing agreement (AVV) as an annex. Personal data stored in the EU.

Audit log

Every write: who, when, before and after. Refused attempts too.

Transport

HTTPS end to end. Passwords stored hashed (bcrypt).

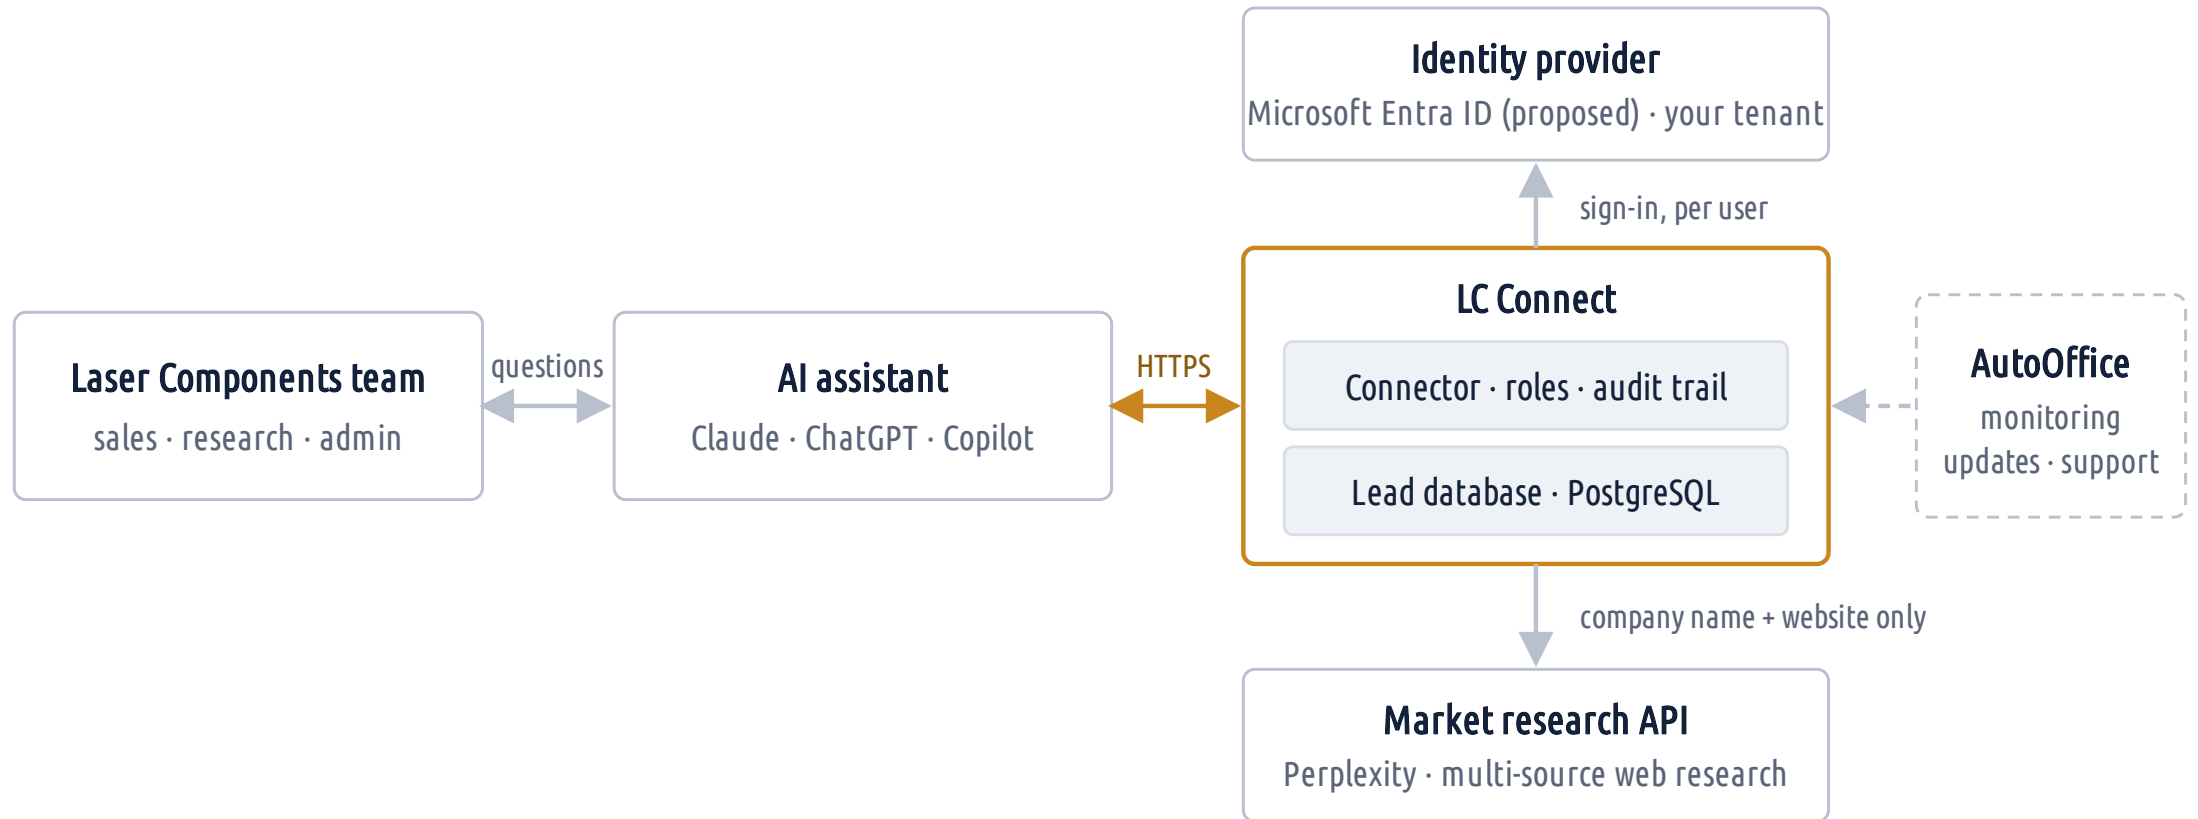

Market research (Perplexity)

Receives company names, websites and product/market questions; never notes, contacts or users.

Exit

Full source in your repository. Data exported and deleted within 30 days.

The same system, as in the service package

The same system as in the service package of 15 September. The harness diagram on slide 3 is its simplified view.
