BRIEFING FOR LASER COMPONENTS

LC Connect what it is and how it works

Monday, 5 October 2026 · prepared by AutoOffice

We do not train a model. **We build a harness.**

Harness = the connector in your service package of 15 September.

The engine

A model from OpenAI or Anthropic, any size you need. Rented by you under your business plan; replaceable.

The harness

Tools for your products, lead base and rules. Designed to learn from every correction.

TRAINING YOUR OWN MODEL INSTEAD

Training **freezes** the model on the day it finishes. The harness keeps learning: every correction, every day.

✗ Not a model fine-tune

✗ Not a CRM

✗ Not a data lake

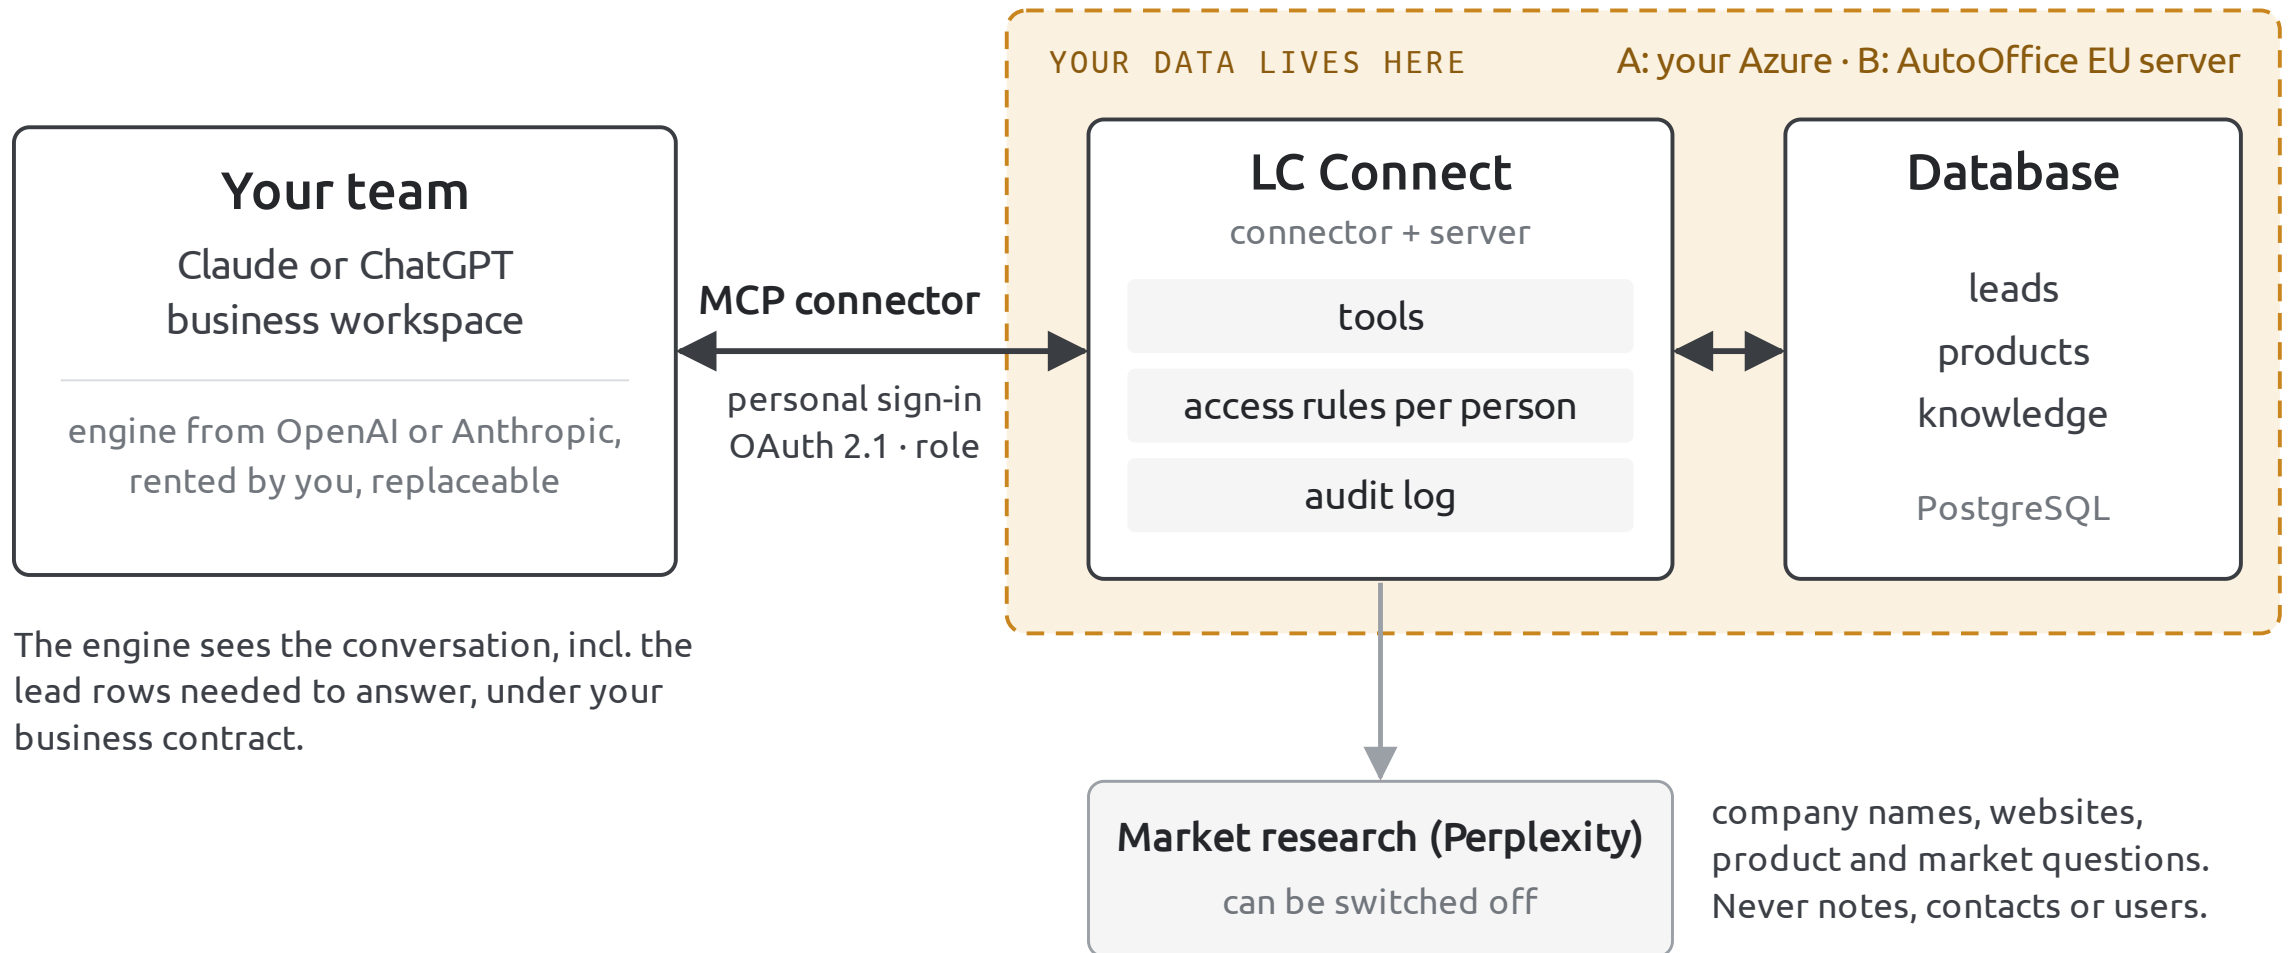

✗ Not a closed system

With LC Connect the assistant finds **all prospects in your base.**
Without it, half or fewer.

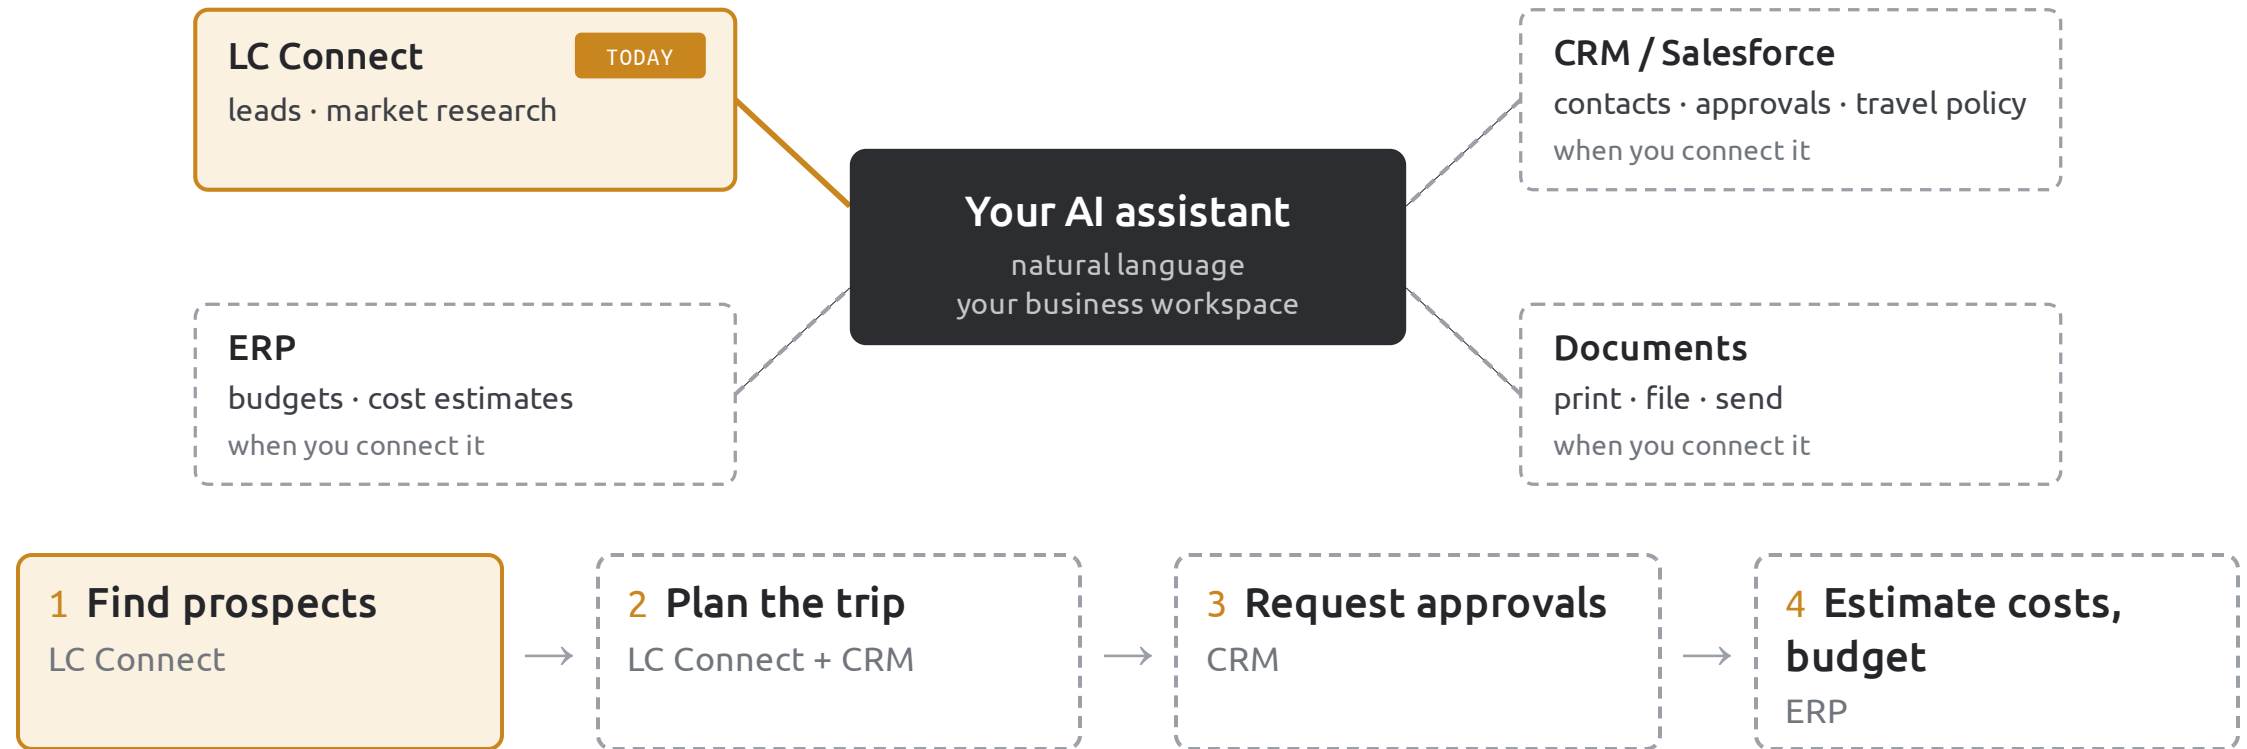

Test of 29 Sept, Claude and ChatGPT: *“Which companies use pulsed laser diodes?”*

FOUND IN LEAD BASE	POLAND	CZECH REPUBLIC
Without LC Connect	4–8 of 6–12 names	0–4 of 5–11 names
With LC Connect	16 of 16 Claude	14 of 14 ChatGPT
Trade fairs	Roles and audit trail	
About 65 % of suggested companies were worth the visit (Łukasz’s test).	Personal sign-in. Every change logged.	

Your data stays in one place you choose.
The engine is rented by you.

One connector in your ecosystem, **not a system of its own.**

Each step is a connector you own or add later. The assistant does the office work between them.

Security depends on the **contract**, not on the tool.

PLAN	TRAINED ON YOUR DATA	PROMPTS STORED	ZERO DATA RETENTION
Claude Enterprise (chat)	No, default	Yes, admin-set period	Not offered for the app
Claude API	No, default	≤30 days	By signed agreement CONTRACT
ChatGPT Enterprise (chat)	No, default	Yes, admin-set period	Not offered for the app
OpenAI API	No, default	Abuse logs ≤30 days	By request, EU residency option CONTRACT
Microsoft 365 Copilot	No, default	Yes, in your tenant	No such option
Grok API (xAI)	No, default	30 days	Admin toggle SETTING
Perplexity API used by LC Connect	No, default	Not retained	Yes, by default DEFAULT

Our rule: company business accounts only; pilot tests so far ran on personal accounts with public data.

Consumer plans train by default. Residency = where data rests + where inference runs.

Vendor pages as of 4 Oct 2026.

Seven decisions. Then daily use becomes routine.

- 1 Green light for the formal pilot terms follow in Munich MANAGEMENT
- 2 Hosting choice A: your Azure · B: EU server MANAGEMENT
- 3 Identity provider for sign-in Entra ID / Google / Okta ALICE · ALEX
- 4 NDA and data processing agreement signed before any company data goes in ALICE · ALEX
- 5 Business workspace accounts for pilot users MANAGEMENT
- 6 Confirm the IT contact for security questions ALICE · ALEX
- 7 A date in Munich second week of November ALICE · ALEX

Four of the seven can be settled in this room.

Like a phone: in use from the first minute, no training course. **Use creates demand, and demand decides what we build next.** The pilot is measured by it: people connected, questions per week.

DAILY USE

You talk to it, typed or by voice.

The model is the clerk: speech into facts the system stores.

Changes are confirmed before saving; confirmation rules per tool.

Fewer slips: IDs and addresses come from the record.

Bogdan Czarnecki · AutoOffice · bogdan.czarnecki@cfi.pl · +48 668 814 400

Security pack in one page

Sign-in: OAuth 2.1 + PKCE, HTTPS, 4 h tokens

Roles: ADMIN, RESEARCHER, SALES; region-scoped editing

Limits: sign-in rate limits, request size limits

Backups: nightly, 30 days, on- and off-site

Perplexity: names, websites, questions; never notes, contacts

Target: your identity provider, your MFA

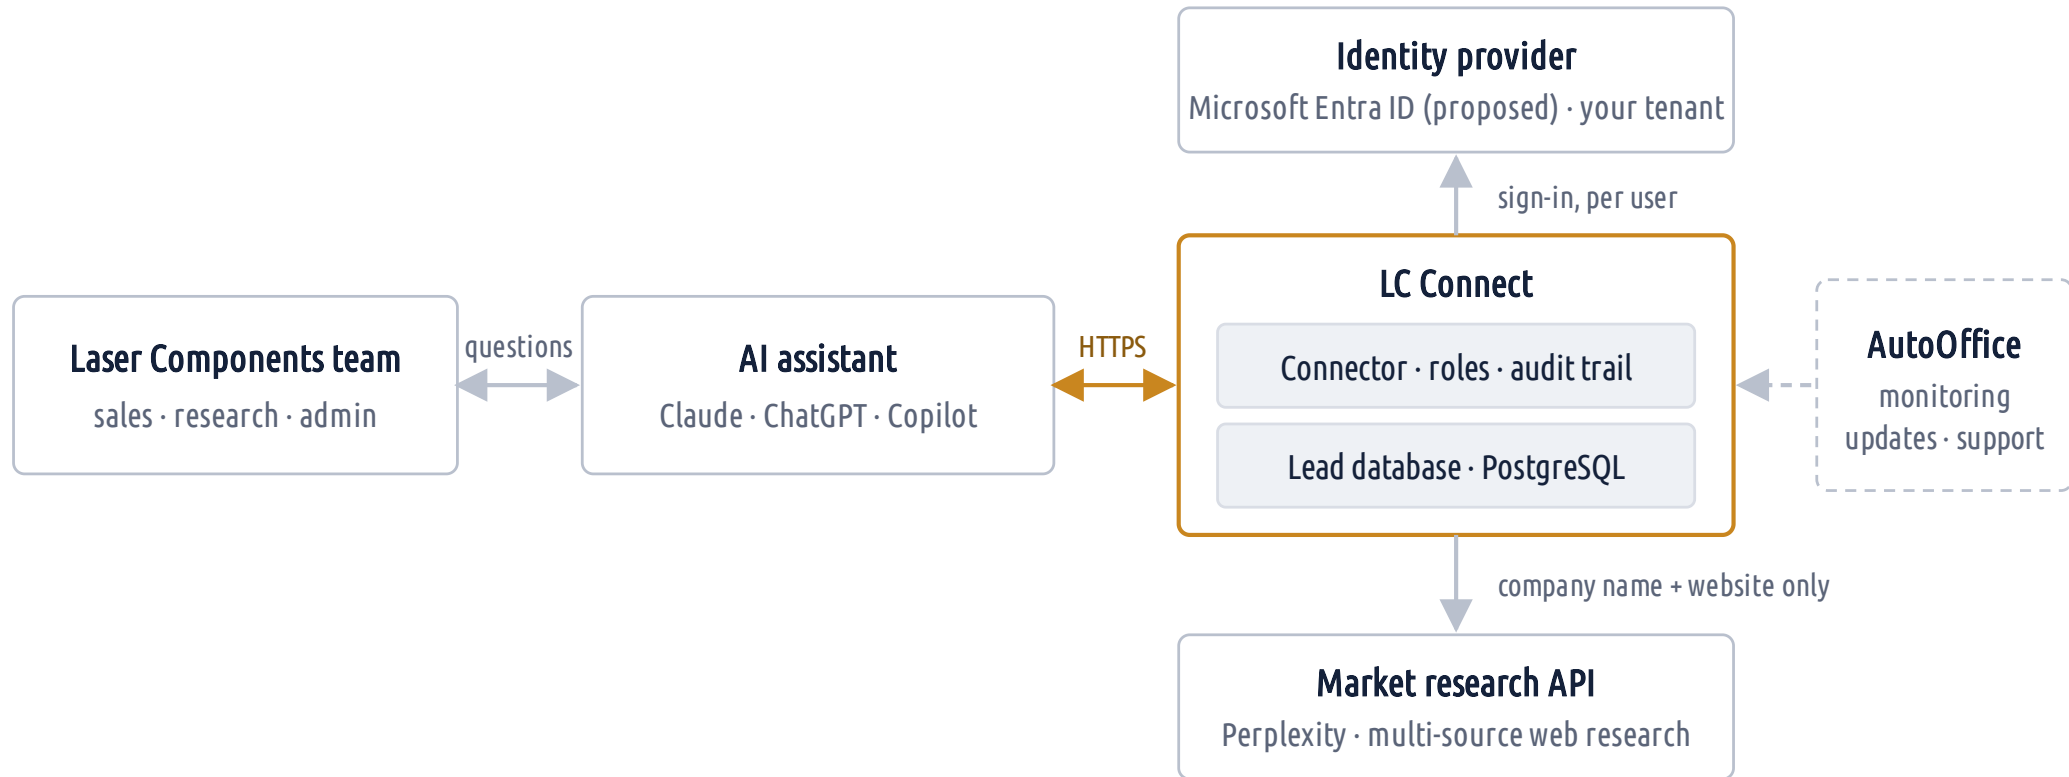

Audit log: every write, refused attempts too

Logs: structured, personal data redacted

Watchdog: full sign-in check every 5 minutes

Hosting: your Azure or EU server; AVV annex

Same system as in the **service package**

From the service package of 15 September, unchanged. Slide 4 is its simplified view.
