

LC Connect: architecture, deployment and service terms

What you asked for ahead of the next call: how the solution is put together and how information flows, which environments and third parties are involved and what it takes to run it, and a draft of the service agreement so operational expectations are aligned from the start.

DRAFT FOR DISCUSSION

Version 2026-09-16

Provider AutoOffice

Customer Laser Components

PART 1

Solution architecture

LC Connect is a small service that sits between the AI assistants your team uses and your own lead database. The assistant never touches the database; every request goes through the connector, which knows who is asking and what they are allowed to do.

Every request from an assistant carries the signed-in user's identity. Issue reports raised inside the assistant reach the operator directly through the connector's built-in reporting tool.

Information flows

FLOW	FROM → TO	CONTENT	PROTECTION
Sign-in	User → connector → identity provider	Corporate identity; the connector receives name, email and group membership	OAuth 2.1 with PKCE; sessions 4 h with silent refresh; your MFA and offboarding apply

FLOW	FROM → TO	CONTENT	PROTECTION
Questions and answers	Assistant ↔ connector	The user's request, and the data needed to answer it (leads, products, notes, analytics)	HTTPS; every call authorised per user and role; every write recorded in the audit trail
Lead data	Connector ↔ lead database	Leads, products, applications, notes, knowledge base, audit trail	Private network only; nightly encrypted backup, 30-day retention
Market research	Connector → research API	Public company name and website of the lead being researched	No notes, contacts or internal data leave the system; usage capped
Issue reports	User → connector → operator	Title, description, category as typed by the user	Delivered to the operator's support channel; time-stamped in the audit trail
Operations	Operator → connector	Updates from the source repository; health checks every 5 minutes	Deployments from the repository you control; no direct database access in normal operation

PART 2

Deployment and prerequisites

There are three environments and three parties. Production can live in your own cloud tenant or on a server AutoOffice manages for you; the two options are drawn side by side and only one is chosen.

Option A keeps the data inside your tenant and reduces AutoOffice to deploy and support access; option B is faster to start and needs nothing from your IT beyond an identity-provider registration. Staging, development and monitoring stay with AutoOffice in both cases.

Hosting options compared

ASPECT	OPTION A • YOUR AZURE TENANT	OPTION B • AUTOOFF
Data location	Your subscription, your region	EU data centre (OVH)
Your IT effort	Create a resource group, a Container Apps environment and a managed PostgreSQL; grant AutoOffice deploy rights; register the app in Entra ID	Register the app in E name
Data protection	AutoOffice acts as processor only for support access	AutoOffice is proces: agreement attached
Running cost (estimate)	EUR 50 to 80 / month, billed by Microsoft to you	EUR 10 to 30 / m
Time to production	About one week after access is granted	About two working d
Recommendation	Preferred if your IT can provide the resources	Preferred to start qu change to the softwa

Infrastructure requirements

REQUIREMENT	SPECIFICATION
Compute	One container: 1 vCPU, 1 GB RAM, 10 GB disk, sufficient for up to 200 users. Measured footprint about 60 MB at rest, under 700 MB at peak load far above expected usage
Database	PostgreSQL 15 or newer, about 100 MB today; managed service preferred
Runtime	Docker image (Node.js 22 LTS inside); no other software on the host
Network, inbound	One public HTTPS hostname reachable from the assistant platforms; TLS certificate (free via Let's Encrypt or the cloud provider)
Network, outbound	HTTPS to the market research API and to the identity provider; nothing else
Identity	An app registration in your identity provider (Entra ID: one enterprise application, sign-in scope only)
Backups	Nightly database dump, 30-day retention; provided by the managed database (A) or by AutoOffice (B)
Monitoring	Provided by AutoOffice from its own environment; needs only the public hostname

Licences, subscriptions and dependencies

ITEM	WHO PROVIDES	COST (ESTIMATE)	NOTES
AI assistant subscription	Laser Components, directly with the AI provider	Provider list price, typically EUR 25 to 30 per user / month	Claude Team or Enterprise, ChatGPT Team or Enterprise, or Microsoft 365 Copilot. Not part of AutoOffice fees and not resold: you bring your own assistant. On organisation plans an administrator enables the connector once for everyone
LC Connect software	AutoOffice	Included in the service fee	Licence for the term of the agreement; full source in your repository; buy-out option in the agreement
Market research API	AutoOffice	Included up to EUR 100 / month	Perplexity, used for multi-source web research on prospects and markets; usage above the cap agreed in advance
Hosting	Laser Components (A) or AutoOffice (B)	EUR 10 to 80 / month	See hosting options
Identity provider	Laser Components	Existing	No additional licence for a sign-in-only app registration
Domain and certificate	Laser Components	Existing domain; certificate free	A subdomain such as connect.lasercomponents.com
Open-source components	—	No fees	PostgreSQL, Node.js, Model Context Protocol SDK, all under permissive licences

Bring your own intelligence. The AI assistant is your subscription with its provider and the only cost that scales with head count. AutoOffice charges a flat service fee, independent of the number of users: the standard deployment (one container) serves up to 200 users. Nothing in the stack is proprietary to a vendor you cannot leave; the connector speaks an open protocol and works with any of the assistants; the source is in a repository you control.

Figures below are the proposed terms for discussion. Sections marked for legal review are standard clauses to be confirmed by both sides' advisers.

1. Parties and scope

AutoOffice (provider) operates and maintains LC Connect for Laser Components (customer). The service covers the connector software, its deployment, monitoring, maintenance, support, and the development capacity described below. It does not cover the assistant platforms, the customer's network and devices, or the identity provider, which remain the customer's own services.

2. Responsibilities

AREA	AUTOOFFICE	LASER COMPONENTS
Software	Development, updates, security patches, compatibility with assistant platform changes	Timely acceptance of updates on staging
Operation	Deployment, monitoring, backups (option B), incident response, monthly uptime report	Hosting resources and access (option A), network and DNS
Identity and users	Integration with the identity provider; role and region model	Identity provider, user lifecycle, assignment of roles and regions, first-line help to own users
Data	Processing strictly as instructed; audit trail; export on request	Data ownership and accuracy; lawful basis for lead data; assistant subscriptions and their terms
Communication	Named contact; support channel; 48 h notice of maintenance	Named contact; reporting issues through the agreed channel; notice of infrastructure changes

3. Availability

- **Target: 99.5 % per calendar month** for the connector, measured by the provider's automated check, which signs in and runs a query through the public address every 5 minutes.
- Excluded from the measurement: announced maintenance, outages of the assistant platforms, the identity provider, the customer's network or hosting resources (option A), and force majeure.
- Automated recovery runs around the clock: a failed check restarts the affected component immediately and alerts the provider.

4. Support and incident handling

- **Channels.** The built-in reporting tool inside the assistant (`report_issue`), which reaches the provider's support channel directly, and email. Reports through the built-in tool carry the user, time and context automatically and are the preferred route.

- **Support hours.** Monday to Friday, 09:00 to 17:00 CET, excluding weekends and public holidays in Poland and Germany. Response times below count in these hours.

SEVERITY	DEFINITION	REACTION	RESOLUTION
S1 • OUTAGE	Service unavailable for all users	Automated restart at once; human response within 4 support hours	Restoration target within one working day
S2 • DEFECT	A function returns wrong results or fails for some users	Within 24 hours on working days when reported through the built-in tool	Fixed the same day where possible; otherwise a patch or workaround is applied and the full fix is scheduled
S3 • MINOR	Cosmetic or low-impact issue	Within 5 working days	Bundled into the next maintenance release
S4 • CHANGE	New feature or improvement request	Collected for the monthly review call	Delivered from the included development hours

5. Maintenance and releases

- Maintenance window: one evening per week (proposed Tuesday 20:00 to 22:00 CET), used only when needed, announced at least 48 hours ahead. Time inside the window is excluded from availability.
- Every change is proven on staging before production. Releases are tagged in the customer's repository with release notes.
- Changes to the assistant platforms' protocol or policies are followed within the included hours.

6. Fees

ITEM	AMOUNT	INCLUDES
Monthly service fee	EUR 1,800 / month	Flat, independent of the number of users (up to 200 on the standard deployment). Covers operation, monitoring, backups, security patches, support as above, 15 hours per month of development and change work, and market research API usage up to EUR 100 per month
Additional work	EUR 85 / hour	Only for scoped projects outside routine maintenance and development, agreed in writing before work starts. Never applied to bug fixes or routine changes
Setup and migration	EUR 3,500 once	Deployment into the chosen environment, identity-provider integration, data processing agreement, runbooks, handover. To be confirmed once the hosting option is chosen
Hosting (option B)	At cost	Passed through from the hosting provider without margin

- No per-user fees. AI assistant subscriptions are contracted and paid by Laser Components directly with the assistant provider; AutoOffice bills nothing for them.
- Included hours are for the month in which they accrue; up to 5 unused hours carry over to the following month. The monthly allowance can be raised by agreement.
- Fees are invoiced monthly in advance. Invoices from AutoOffice (Poland) to Laser Components (Germany) are a reverse-charge B2B supply.
- Fees are reviewed annually and may rise by 5 % or the consumer price index, whichever is higher.

7. Software licence

- For the term of the agreement, Laser Components holds a non-exclusive licence to use LC Connect for its own business, with full source code in a repository it controls, and may let a third party operate it on its behalf.
- **Buy-out option.** At any time, or on termination, Laser Components may acquire a perpetual licence to its connector for a one-off fee equal to **six monthly service fees**, after which no further licence fees apply. Operation and support can continue under this agreement or be taken over by another provider.
- AutoOffice retains ownership of the underlying framework and shared components and the right to use them for other customers. Laser Components' data, configuration and knowledge base are and remain Laser Components' property.

8. Data protection

- Laser Components is the controller of the lead data; AutoOffice is a processor and acts only on documented instructions. A data processing agreement (Auftragsverarbeitungsvertrag) is attached as an annex and lists the sub-processors: the hosting provider, and Perplexity, which receives public company names and websites only.
- The assistant platforms are the customer's own processors under the customer's subscriptions.
- Personal data is stored in the EU. On termination, data is exported to the customer and deleted from the provider's systems within 30 days, backups included after their retention period.

9. Security

- Sign-in via the customer's identity provider; role-based authorisation on every operation; audit trail of every write, including refused attempts.
- Encrypted transport; secrets held outside the source code; dependencies checked for known vulnerabilities on every release.
- Security incidents affecting customer data are reported to the customer's named contact without undue delay and within 24 hours of confirmation.

10. Reporting and governance

- Monthly: uptime figure from the monitoring record, incidents and their resolution, hours used, and the change log.
- Monthly review call (30 to 60 minutes) to prioritise change requests and plan the next month's development hours.

11. Term and exit

- Initial term 12 months, then renewing for 12-month periods; termination with 3 months' notice to the end of a term.
- On exit: the source code is already in the customer's repository; a complete database export is provided; AutoOffice supports the transition to the customer or a new provider for 30 days within the final month's included hours.

12. Liability **LEGAL REVIEW**

Each party's liability under this agreement is limited to the fees paid in the preceding 12 months, except for wilful misconduct, gross negligence, and breaches of data protection obligations, where statutory rules apply. Standard wording to be aligned by both parties' advisers.
